

Sarah Smith

(832) 948 - 5012 | ssmith.io.v0@gmail.com | www.linkedin.com/in/slsmith

Education

University of Arkansas

B.S. Computer Science, *Dean's List*

May 2026

GPA: 3.2

Work Experience

J.B. Hunt Transport Services

Software Engineering Intern

May 2025 – August 2025

- Consolidated 4 redundant APIs into 1 NMFTA-standard API, driving digital transformation by reducing system fragmentation.
- Developed Angular frontend features including UI components, navigation, and workflow improvements to enhance usability.
- Integrated frontend with unified API endpoint, ensuring accurate JSON data flow across application states and UI components.
- Designed reusable Angular UI components using object-oriented principles to improve maintainability and reduce redundancy.
- Reduced user path from 6 clicks to 3 by streamlining navigation, reducing manual interactions steps through interface automation.
- Collaborated across 2 Agile teams using Azure DevOps, tracking features, bugs, and milestones through build-test-deploy cycles.

Whiskey 101

Disk Jockey (DJ)

June 2024 – May 2025

- Delivered live entertainment for 500+ guests weekly by managing audio and lighting systems in high-pressure environments.
- Adjusted music selection, pacing, and transitions based on crowd engagement to maintain 30% occupancy through closing.
- Coordinated 100+ song transitions per event while balancing time constraints, audience response, and operational flow.
- Collaborated with venue staff and security to ensure smooth event execution and resolve operational issues in real time.
- Demonstrated rapid decision-making and systems-level thinking by dynamically adapting performance to audience feedback.
- Maintained consistent user experience quality under strict time constraints while balancing technical execution and engagement.

Skills

C++, Javascript, Typescript, Python, Angular, React, SQL, Full-Stack Web Development, Azure DevOps, JIRA, Git Libraries, Dean's List, National Registry of Emergency Medical Technician Certification, CPR Certification

Projects

PhishWise Cybersecurity Training

Senior Capstone Project

- Led the development of a cybersecurity training platform using TypeScript, React, PostgreSQL, Google OAuth, and Vercel.
- Coordinated project timelines, managed team deadlines, and maintained technical documentation throughout development.
- Designed user interface and assisted planning the overall system architecture for manager-driven phishing simulations.
- Implemented systems where managers could invite users, send simulated phishing emails, and assign targeted learning modules.
- Coordinated development and design initiatives to enhance user experience, maintaining timelines and documentation standards.

Neural Network to Classify Images

Machine Learning Project

- Designed and implemented a neural network for image classification using Python to train and evaluate predictive models.
- Implemented forward propagation and backpropagation algorithms to minimize classification error across training datasets.
- Experimented with multiple model architectures and activation functions to improve accuracy and model performance.
- Processed and analyzed image datasets, evaluated training results, and compared performance metrics across configurations.
- Strengthened technical understanding of artificial intelligence and deep learning through implementing neural network models.
